HOOTBOOTH

Software Branding Guide
Start Screens
Countdown Screens

Updated July 26, 2016

Photobooth Software Screens

Screenshots below are samples showing the photobooth progress start screen, countdown and closing screens.

1- Start screen - fully brandable edge to edge, sized 1280 x 800 jpeg @72dpi

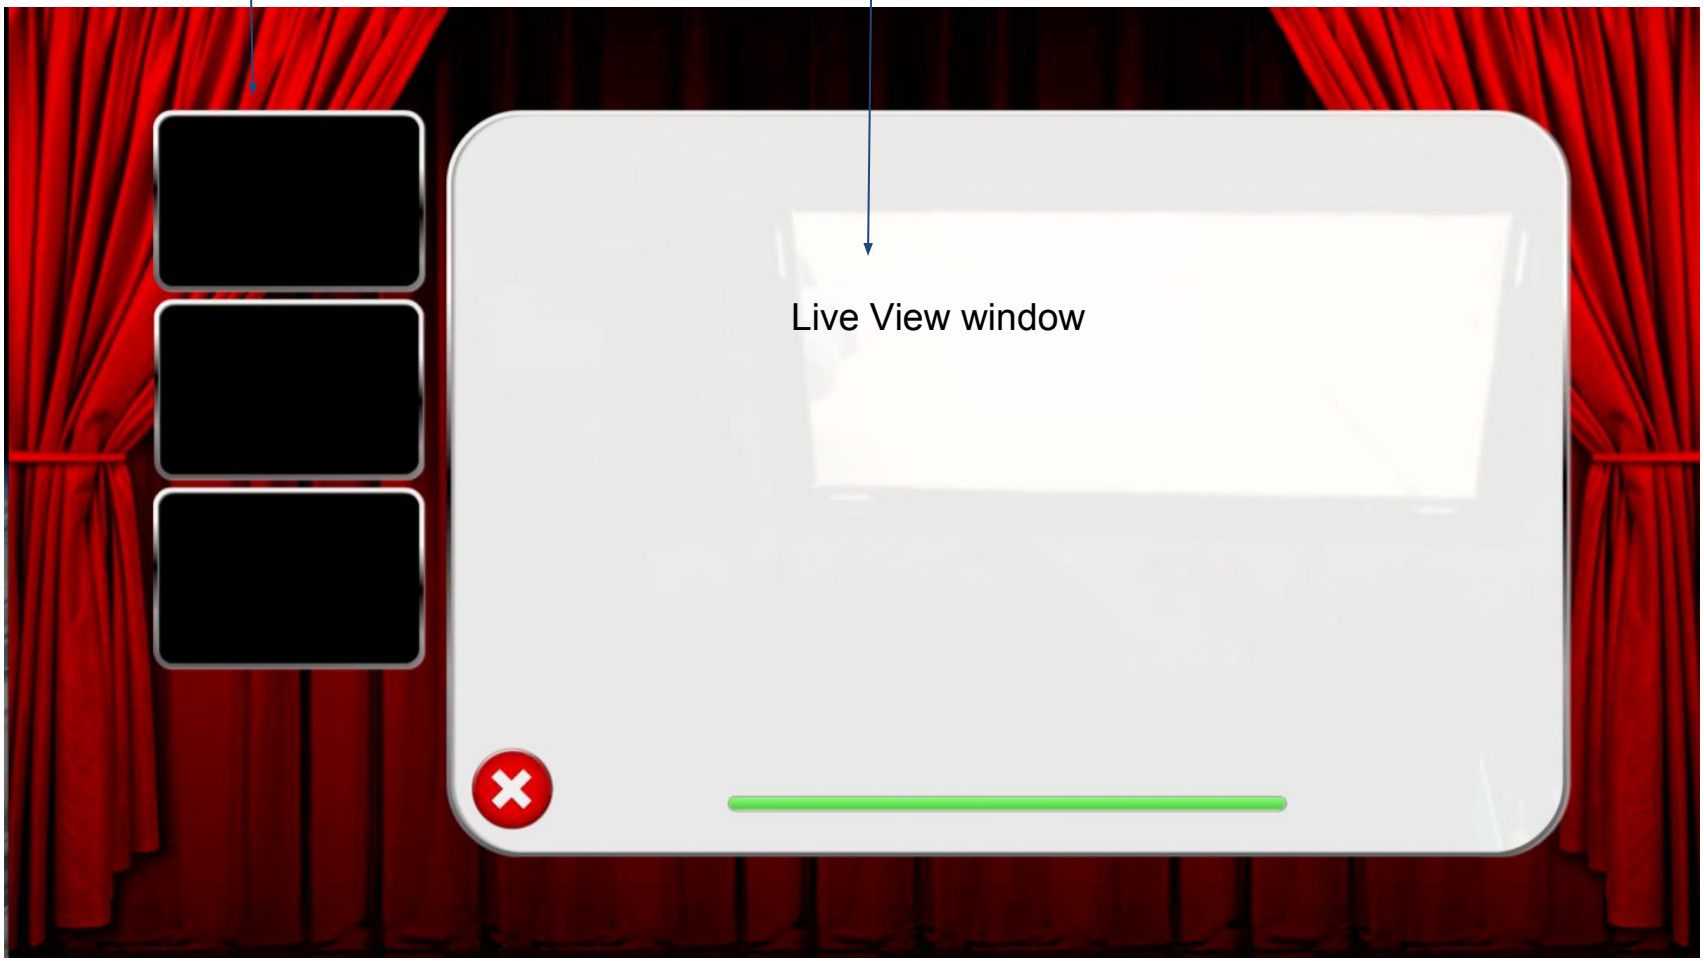
2- Countdown screen- Brandable edges - sized 1280 x 800 jpeg @72dpi

3 and 4- Same graphic as #2, custom message changed in software UI

Start screen should include a graphic indicator for the photobooth guest to TOUCH TO START

These graphcs can be hidden, or reside on top of custom jpeg

Countdown screen will have the photo LIVE VIEW and the snapshots preview on top of the customer graphic.



Please wait.

- Set custom message at bottom

Sample1

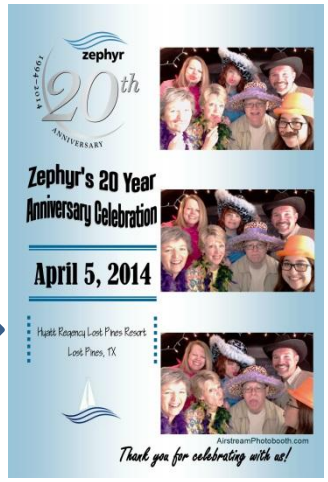
Sample2

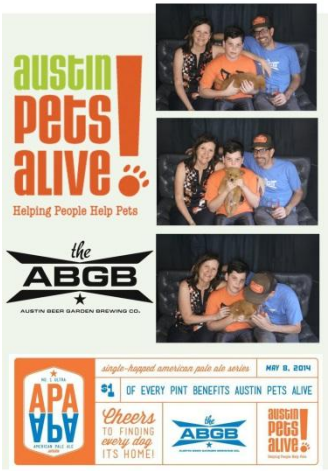
OR

Full size 4x6

Either Vertical or Horizontal

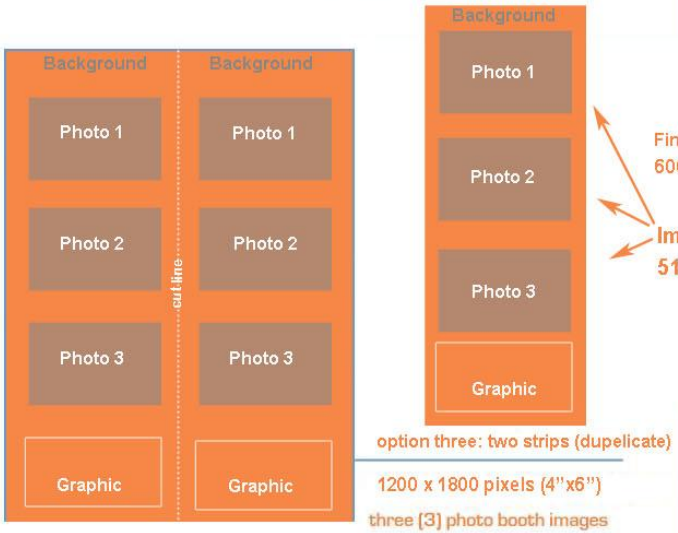
- Prints 1 per session
- Set background color, pattern
- Custom message and branding





HOOTBOOTH

graphic specifications



requirements

- Before creating a graphic, choose between either the horizontal or vertical graphic options. Only one graphic file will be accepted.
- The complete graphical presentation must be 1200x1800 pixels.
- 300 dpi.
- JPEG format.
- RGB mode.

recommendations

- Avoid putting any information in close proximity to where the photo booth images are planned.
- When considering a design, do not forget the theme or colors.
- Ask us to include a favorite flourish for the corners of the piece or in the corners of each photo booth photo for that special touch.
- Avoid making the piece "too busy" with overly ornate graphics for the background. A pattern or repeating watermark often looks best.
